

## Unifi Technologies and Doclopedia Announce Two Way PHR and EMR Integration

BEND, Ore., January 13, 2010 -- **Unifi Technologies** and **Doclopedia** announce two way PHR and EMR integration to be rolled out nationwide.

The **Doclopedia** PHR solution allows patients to import information from their Doctor as well as input information themselves. This tool is the perfect complement to **Unifi Technologies** electronic medical records solution, **Unifi-Med**, a fully-integrated EMR and practice management suite of capabilities. The creation of a bridge between the two solutions completely automates the transfer of information from physician to patient and back again updating EMR and PHR simultaneously. This complete symbiotic solution provides a competitive advantage in the healthcare space.

“The goal of **Doclopedia** is to provide patients the ability to create the most accurate Personal Health Record for themselves and their Doctor. The partnership between **Doclopedia** and Unifi Technologies achieves the goal of creating an interface between the patient and the office so that everyone has the most up-to-date information.” said Charles Spannagel, Executive Vice President of **Doclopedia**. “**Doclopedia** allows the Patients to create their Personal Health Record from the comfort of their home and send the information directly into the **Unifi-Med** system. Once a patient is seen and new records are added in **Unifi-Med**'s system, the information will automatically update back into the patient's My **Doclopedia** PHR. This type of two way integration creates a seamless PHR/EMR. We are confident this solution plays upon the unique strengths of both **Doclopedia** and **Unifi Technologies**.”

**Doclopedia** is an online Healthcare organizer and marketplace. **Doclopedia** provides a free platform for patients to develop a Personal Health Record (PHR) by obtaining information directly from their doctors and themselves.

**Unifi Technologies** web-based EMR solution, **Unifi-Med**, was designed by physician for physician. **Unifi-Med** built on cloud computing never requires investments in hardware, software, upgrades, installations or IT team. With **Unifi-Med** all you need is an internet connection to access your EMR solution.

Randy Barnes, COO of **Unifi Technologies** concludes, “The **Unifi-Med** and **Doclopedia** partnership creates a virtual databank of information for patient and practice. **Doclopedia** fills a need for both healthcare research and patient information by creating and maintaining an individual PHR via the internet. With **Unifi-Med**, also completely internet based using cloud computing, we provide the EMR sophistication with eprescribing, lab ordering, mobile computing and more.”
